

Unix Workshop 2011

What is Unix

- Multitasking, multiuser operating system
- Often the OS of choice for large servers, large clusters
 - 64% of web servers run some type of Unix
 - 96% of Top500 supercomputers run Unix
 - Of which 95% of them are Linux

Unix Around You

- You're probably familiar with these:
 - Linux
 - Solaris
 - Mac OS X (roots from FreeBSD and NetBSD)
- And these websites:

What is SunFire?

In 2001: Full-sized rack

Today: A solaris zone in a blade of a chassis quarter-size of a rack!

Programming Workflow

Activity: Login to NUSNET

- Press Ctrl-Alt-Delete
- Type in your NUSNET user name, password, and select the NUSSTU domain
- Click the OK button

Activity: Creating your Unix Account

- <https://mysoc.nus.edu.sg/~newacct>
- Login using your NUSNET user name and password

On Activity: Connecting to SunFire

1. From the desktop, launch the SSH Secure Shell Client application

2. Click on Quick Connect

Host Name: sunfire.comp.nus.edu.sg

User Name: Your SoC user name

3. Click on Connect

4. Click on “Yes” at the Host identification dialog

5. Enter your SoC password in the password dialog

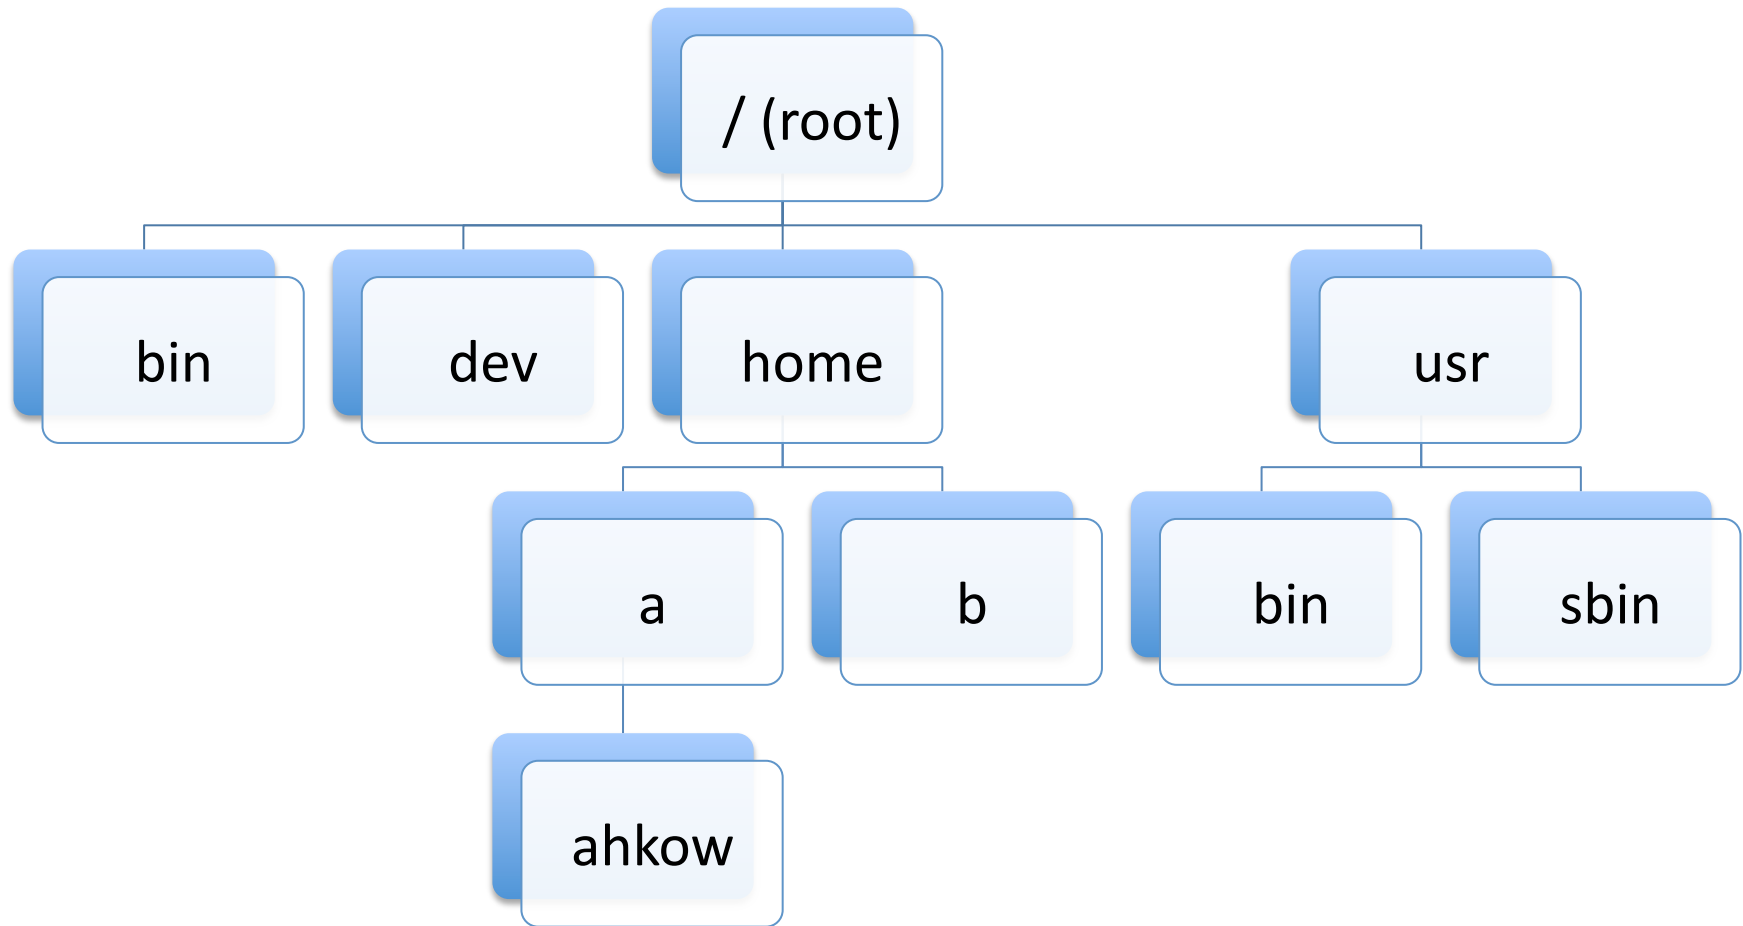

Command Line Interface

A screenshot of a terminal window with a title bar that reads 'lzs — lzs@lzshome:~/bin — ssh — 80x24'. The terminal shows a user 'sadm' at a host 'sunfire0' with a root prompt '\$'. The user has entered the command 'ls', and the output is a multi-column listing of system directories: bin, export, local, oraclient, sbin, tmp, and var on the first line; cvsroot, home, mnt, platform, share, user on the second; dev, kernel, net, proc, specproj2, usr on the third; and etc, lib, opt, samfs, system, usrlocal on the fourth. The prompt '\$' is followed by a cursor.

```
sadm@sunfire0:/$ ls
bin      export  local   oraclient sbin    tmp      var
cvsroot  home    mnt     platform  share   user
dev      kernel  net     proc      specproj2 usr
etc      lib     opt     samfs     system  usrlocal
sadm@sunfire0:/$
```

Unix Directory Tree

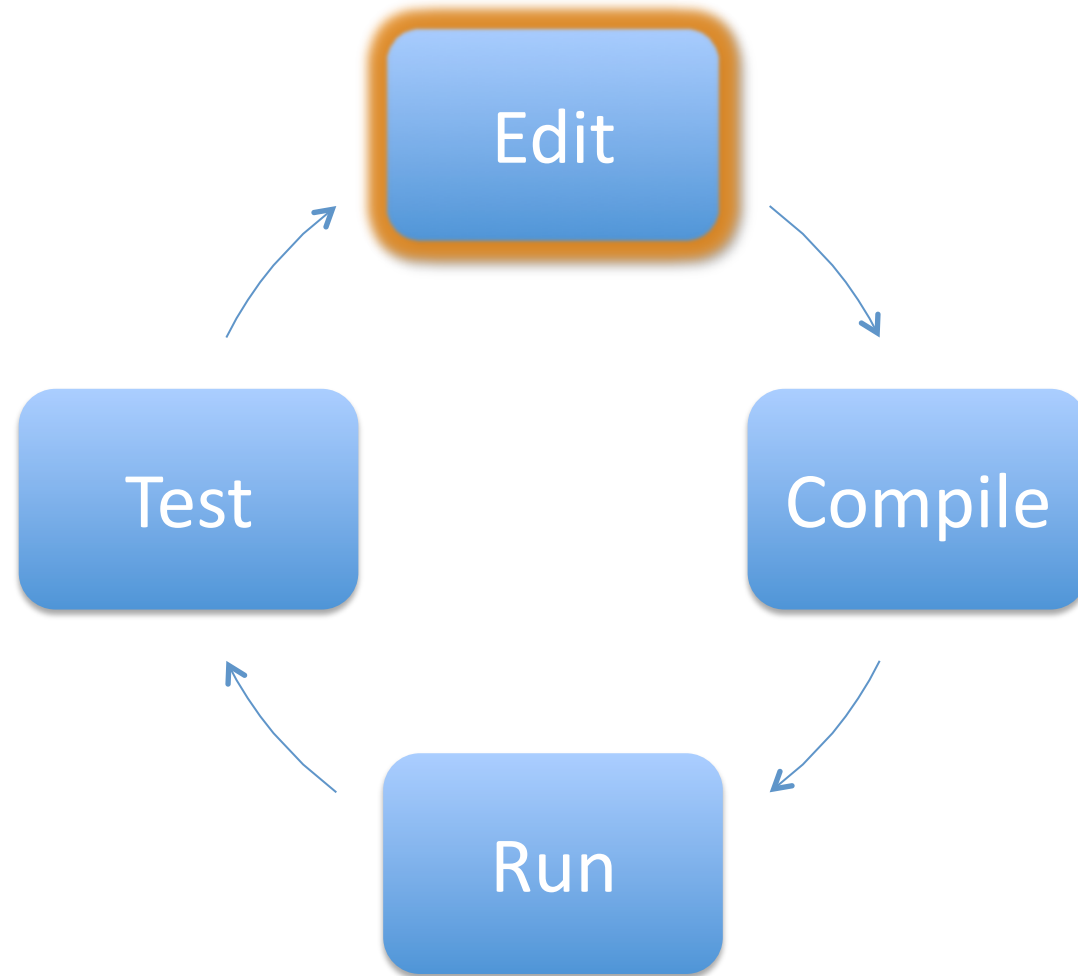

Parts of a Command

\$ program argument1 argument2 ...

Activity: Working with Files and Directories

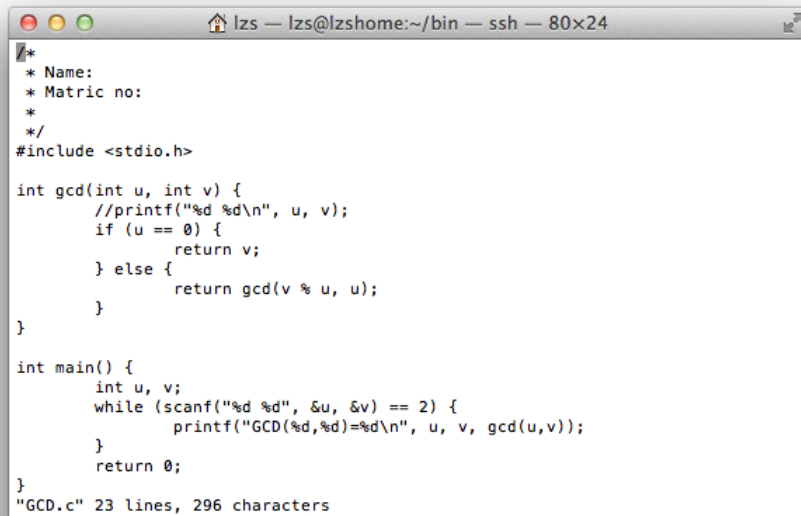

1. After login, you are in your home directory, e.g. /home/l/laizs
2. Check your current working directory:
\$ pwd
3. Show files in your current directory:
\$ ls
4. Create a new directory:
\$ mkdir UNIXWorkshopFiles
5. Switch to the new directory:
\$ cd UNIXWorkshopFiles
6. Check your current working directory again: pwd

Edit

Text Files

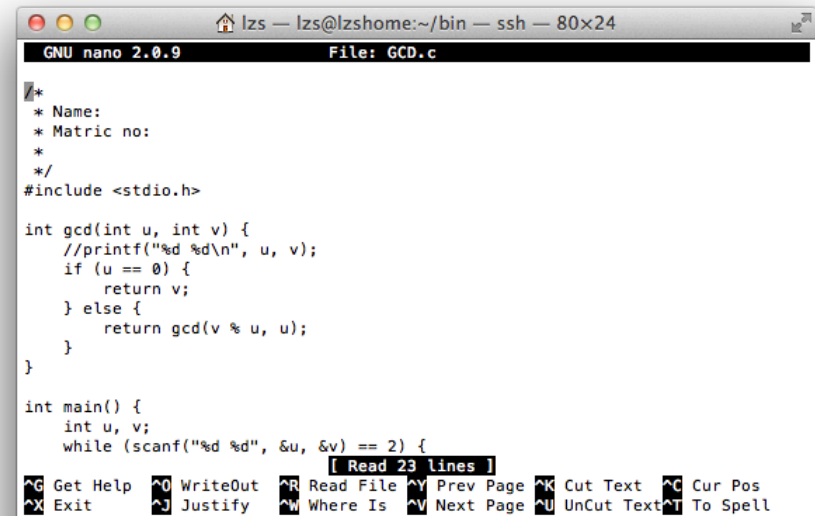

- Program source code is stored in text files.
- A good text editor will dramatically improve your productivity.

```
lzs — lzs@lzshome:~/bin — ssh — 80x24
/*
 * Name:
 * Matric no:
 */
#include <stdio.h>

int gcd(int u, int v) {
    //printf("%d %d\n", u, v);
    if (u == 0) {
        return v;
    } else {
        return gcd(v % u, u);
    }
}

int main() {
    int u, v;
    while (scanf("%d %d", &u, &v) == 2) {
        printf("GCD(%d,%d)=%d\n", u, v, gcd(u,v));
    }
    return 0;
}
"GCD.c" 23 lines, 296 characters
```

```
GNU nano 2.0.9 File: GCD.c
/*
 * Name:
 * Matric no:
 */
#include <stdio.h>

int gcd(int u, int v) {
    //printf("%d %d\n", u, v);
    if (u == 0) {
        return v;
    } else {
        return gcd(v % u, u);
    }
}

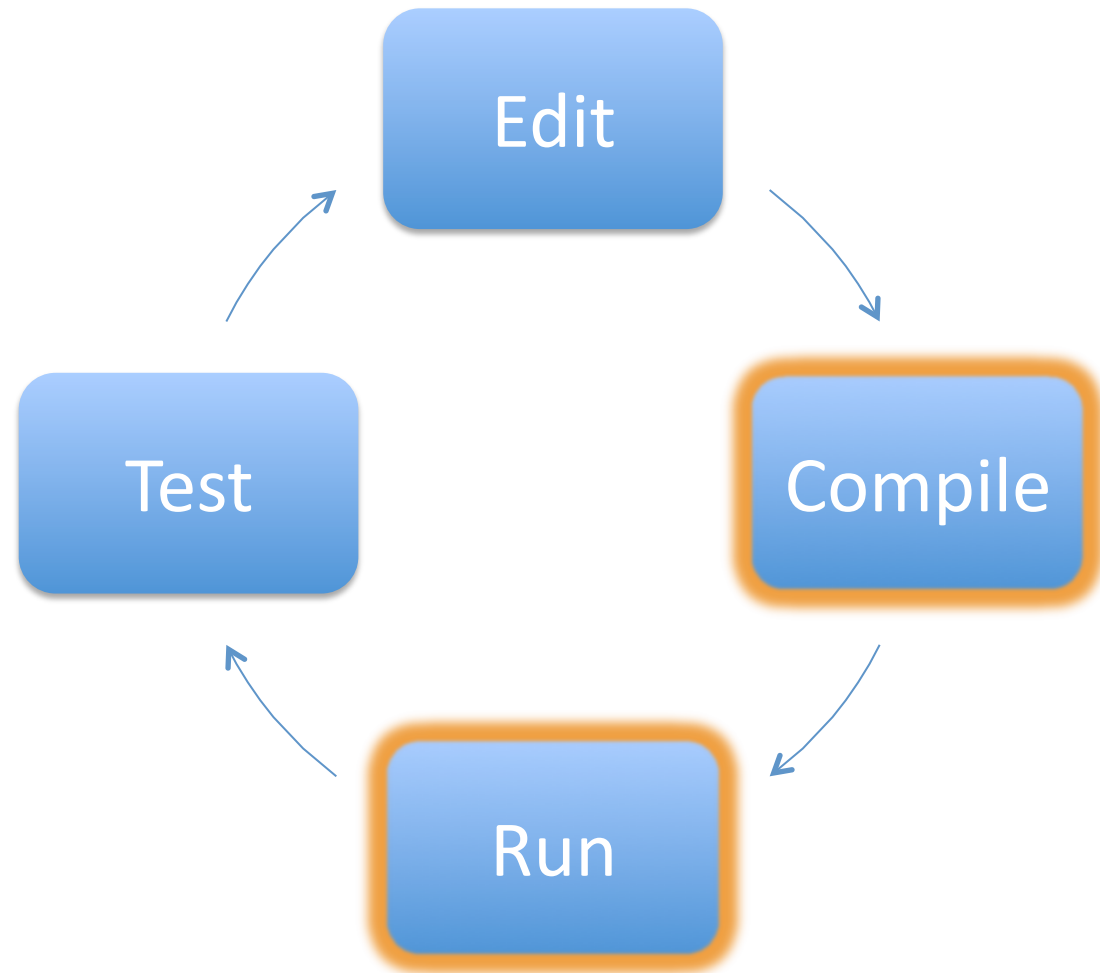

int main() {
    int u, v;
    while (scanf("%d %d", &u, &v) == 2) {
        Read 23 lines
    }
}

^G Get Help ^O WriteOut ^R Read File ^Y Prev Page ^K Cut Text ^C Cur Pos
^X Exit ^J Justify ^W Where Is ^V Next Page ^U UnCut Text ^T To Spell
```

Activity: Text Editing with Nano

1. Download the sample GCD.c program from the UWS website using wget
\$ wget <http://download.comp.nus.edu.sg/GCD.c>
2. Edit the file using the editor nano
\$ nano GCD.c
3. Type in your name and matric number as indicated in the file.
4. Save the file and exit nano by pressing Ctrl-X
5. Check the contents of the file using the cat command:
\$ cat GCD.c

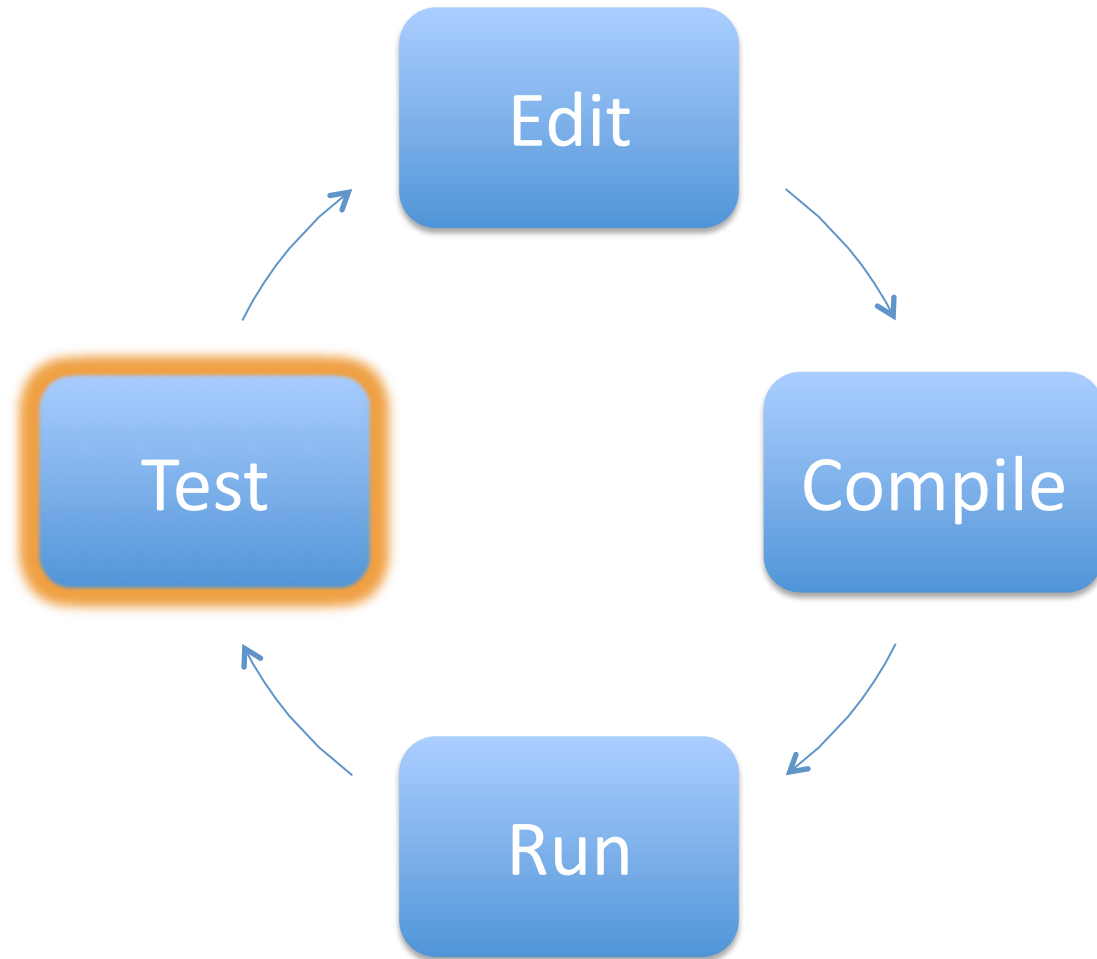

Compile and Run

Activity: Compiling and Running

1. C programs are compiled using the gcc compiler
\$ gcc GCD.c
2. To run a program, you must add ./ in front of its name; the default name used by gcc is a.out
3. Run the GCD program
\$./a.out
4. Type in a pair of integers followed by the Enter key, for example:
58 24
5. Repeat step 4 as many times as you like
6. To force the program to end, press Ctrl-C

Test

Testing – Blackbox Testing

Testing in Unix

\$ program < input > output

Activity: Creating the Input

1. Instead of typing the input by hand as in the previous activity, we create an input file using nano
\$ nano input
2. Type in pairs of integers, one pair per line, e.g.:
3 10
15 25
200 420
3. Save and exit nano

Activity: Creating the Correct Output

1. Create a file for the correct output
\$ nano answer
2. Type in the correct GCD for each pair of integers in the input
GCD(3,10)=1
GCD(15,25)=5
GCD(200,420)=20
3. Save and exit nano.
4. Run the GCD program on the test case.
./a.out < input > output

Activity: Find the Bugs

- Open output in nano and verify if it matches the correct answer.
\$ nano output
- If they differ, you've found the bug!
Else try again with different input/answer files
- Hint: manually checking whether two files are identical is boring, try using the diff command:
\$ diff answer output

SMS Word Count

For example, given the following text file:

U wan 2 haf lunch i'm in da canteen now.

Haf u found him? I feel so stupid da v cam was working.

Where r we meeting?

I went to ur hon lab but no one is there

The desired output is:

.
. .
. .
1 we
1 went
1 Where
1 working.
2 da
2 I

Activity: sort and uniq

- Two Unix commands useful to this task:

sort

Input:

dog
bat
log
cat

Output:

bat
cat
dog
log

uniq

Input:

dog
dog
cat
cat
dog
cat
cat

Output:

dog
cat
dog
cat

SMS Word Count

1. Download the file containing sms messages using wget:
\$ wget <http://download.comp.nus.edu.sg/SMSwords.txt>
2. Sort the file:
\$ sort SMSwords.txt
3. Sort and remove duplicates:
\$ sort SMSwords.txt | uniq
4. We need to use a particular option of uniq which counts the number of duplicates; learn about it from uniq's manual page:
\$ man uniq
5. Sort and count words:
\$ sort SMSwords.txt | uniq -???
6. Sort by the frequency, so that more frequent words appear later:
\$ sort SMSwords.txt | uniq -??? | sort -n

Activity: Logging Out

\$ logout

Useful Websites

- KiTTY, SSH client for Windows:
<http://www.9bis.net/kitty/>
- Cygwin, UNIX-like environment for Windows:
<http://www.cygwin.com/>
- Description of computing facilities in SoC:
<http://docs.comp.nus.edu.sg/cf>
